

High Quality

## Modular workshop equipment system

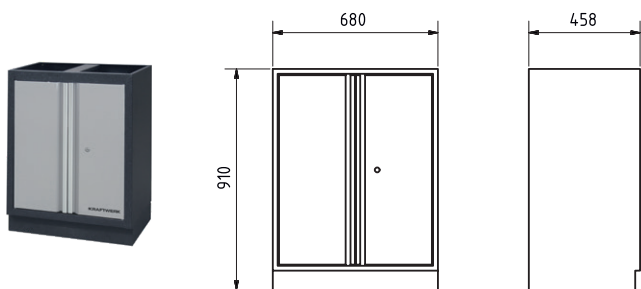

for compilation following individual needs. Freestanding construction, no fixtures and no walls necessary to place, very flexible to install. Each module can be ordered individually. Ball-bearing guided drawers of different heights, fitting all KRAFTWERK-tool inserts (COMPLETO-hardshells, EVA, EVA3) with central locking system and single locking drawers.

With our one-key solution, subsequently it is possible to rebuild all locks with the same lock number so that only one key is needed.

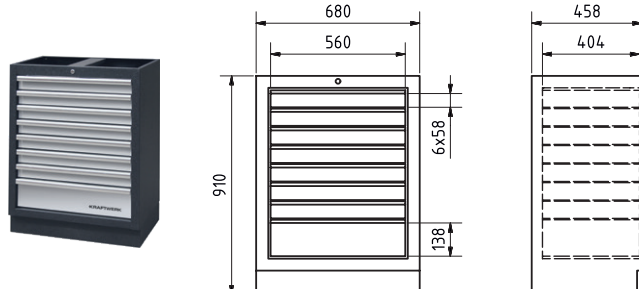

Wide range of accessories compatible to the new pack panels with square holes for professional storage of tools.

As a worktop, different models can be selected depending on the application:

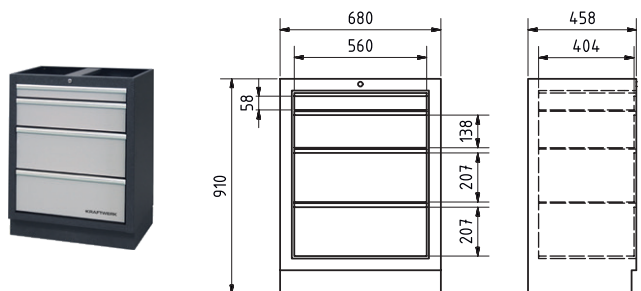

- Beech multiplex/wood
- Stainless steel 430
- Stainless steel 304
- Solid Surface

**Art. 3964-12-01** Shelf board for Art. 3964-12

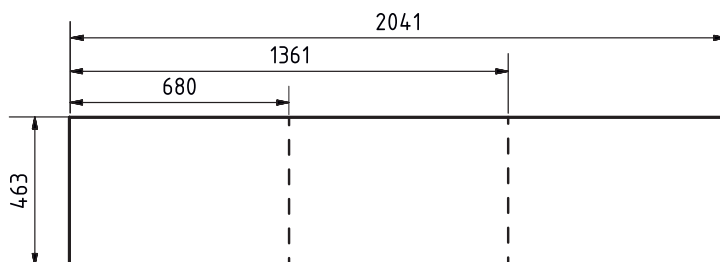

BEECH MULTIPLEX

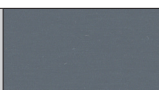

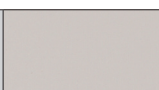

STAINLESS STEEL 304

The **beech multiplex** worktops consist of several layers of peeled veneers, which are connected with an adhesive. These cross-laid veneers ensure the excellent properties of the beech wood, such as high strength and dimensional stability. An appealing and natural look is one of the other advantages of these worktops.

The **stainless steel 304** is commonly known as V2A steel. The stainless steel alloys 304 is characterized by a particularly high nickel and chromium content (18% chromium and 8% nickel), and is therefore highly resilient to heat and cold. Advantages of these alloys are corrosion resistance, the excellent formability, ease of manufacture and cleaning and thanks to its absolutely non-porous surface extremely hygienic. In addition, the stainless steel worktop is resistant to water, steam, humidity, weak organic and inorganic acids and has a wide range of uses.

STAINLESS STEEL 430

SOLID SURFACE

The **stainless steel 430** has a density of 7.70 g/cm<sup>3</sup> and is a ferritic steel. With a chromium content of 17% thus it has good corrosion resistance. Further advantages are a very good polishing ability, deep drawability and bending capacity. The high chromium content gives the steel a good resistance to water, steam, humidity as well as weak acids and alkalis.

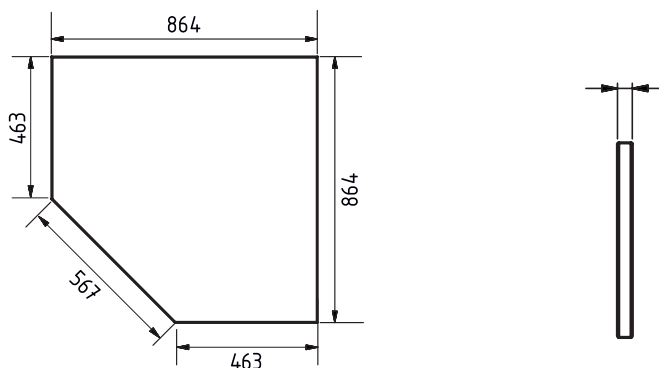

**Solid Surface** is a homogenous, non-porous material which consists of a mixture of natural minerals and acrylic resins. It ideally combines practicality with endurance and elegance.

Solid Surface ensures optimum hygiene and antibacterial protections, because no dirt can stick to the surface.

The worktop is protected from UV radiation and maintaining its colour and finish unspoiled for many years.

Solid Surface is highly resistant to stains, as its non-porous synthesis does not allow to colourants to penetrate and deform the material.

The material is durable to frequent use, while at the same time it is easy to clean. Also, if needed, it can be easily repaired, in order to regain its initial beauty.
